# FI Auditor Portal

Case Management · Review Workflow · Decision Guide

Prepared: 30 May 2026 23:52 | Login: test / test

## 1. Purpose & Access

|              |                                                                                                                                  |
|--------------|----------------------------------------------------------------------------------------------------------------------------------|
| URL          | http:///auditor/                                                                                                                 |
| Credentials  | Username: test   Password: test (bank employee access)                                                                           |
| Purpose      | Review submitted FI cases, inspect all captured data, view the credit assessment report, and record an Accept or Reject decision |
| Access scope | All submitted cases across all field officers                                                                                    |

## 2. Auditor Workflow

|                    |                                                                                                                                                                                                |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Login           | Enter bank employee credentials. Session stored as a secure cookie (24 h TTL)                                                                                                                  |
| 2. Case List       | Table showing: Date, Case ID (link), Customer Name, PAN Number, Status (Complete / Incomplete), Decision (Pending / Accepted / Rejected), Reviewed By (auditor name + timestamp), Download PDF |
| 3. Open Case       | Click Case ID — opens in a new browser tab for side-by-side review                                                                                                                             |
| 4. Review Sections | Scroll through all 8 sections on a single page; use the jump-nav bar at the top to skip to any section                                                                                         |

|             |                                                                                         |
|-------------|-----------------------------------------------------------------------------------------|
| 5. Decision | Enter optional notes in the notes field; tap Accept or Reject in the sticky bottom bar  |
| 6. Result   | Decision saved to disk (decision.json); Case List updated with auditor name + timestamp |

3. Case List Page

Table Columns

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• # — row number</li><li>• Date — session start date</li><li>• Case ID — unique identifier (clickable, opens detail in new tab)</li><li>• Customer Name — from application form or Q&amp;A; fallback</li><li>• PAN — masked PAN number from form</li><li>• Status — Complete (green) when answers + photos + report all present; Incomplete otherwise</li><li>• Decision — Pending (purple)   Accepted (blue)   Rejected (pink)</li><li>• Reviewed By — auditor username + decision timestamp</li><li>• Report — direct PDF download button</li></ul> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Search & Refresh

|                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• Search box filters by Case ID or Customer Name in real time</li><li>• Refresh button (top right) reloads the case list from the server</li></ul> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

4. Case Detail Page

Lavout

|                 |                                                                           |
|-----------------|---------------------------------------------------------------------------|
| Sticky header   | Case ID + customer name + session dates + Download PDF button (top right) |
| Jump navigation | 8 anchor links for instant scroll to any section                          |
| 8 sections      | All data rendered in one scrollable page — no tabs                        |
| Sticky footer   | Notes textarea + Accept / Reject buttons — always visible                 |

Section Reference

|                   |                                                                              |
|-------------------|------------------------------------------------------------------------------|
| Overview          | Applicant details (form data) + session info + completeness checklist        |
| Field Interview   | All Q&A; answers with GPS coordinates; INCOMPLETE shown if answer missing    |
| Home Evidence     | Photo grid with: tag, blur score, GPS, nameplate OCR, image analysis         |
| PAN Verification  | OCR results, 3-way name match, NSDL status, face match similarity score      |
| Income Analysis   | Bank statement metrics: income, expenses, savings, bounces, creditworthiness |
| Location Report   | GPS spread PASS/FAIL (500m threshold), geocoded address, per-point table     |
| Credit Assessment | Score (0-100), grade, recommendation, 4 pillar scores, loan eligibility      |

|            |                                       |
|------------|---------------------------------------|
| Report PDF | Embedded PDF viewer + Download button |
|------------|---------------------------------------|

## 5. Completeness & Incomplete Indicators

### A case is marked Complete when ALL of these are present

- ✓ At least one Q&A; answer recorded
- ✓ At least one property photo captured
- ✓ PDF credit report generated

### INCOMPLETE notices appear in the report and case detail when

- Application form data not submitted
- Q&A; answers missing or GPS not captured for an answer
- Home photos not captured
- PAN card not captured or OCR failed
- Bank statement not uploaded
- Credit analysis not performed (OpenAI key not configured)

## 6. Decision Recording

### Process

- Review all 8 sections thoroughly, especially PAN verification and income analysis
- Enter any relevant notes in the notes field (optional, free text)
- Tap Accept to approve the case for further processing
- Tap Reject to decline the application
- Decision is saved immediately to disk with auditor name + timestamp
- The Case List page reflects the decision instantly on next refresh

### Decision Criteria Guidelines

- ACCEPT: Location verified (PASS) + PAN matched + income sufficient + no major risk flags
- REJECT: Location FAIL (spread > 500m) OR PAN mismatch OR income inadequate OR multiple bounced transactions
- INCOMPLETE cases should be escalated to the field officer before a decision is made

## 7. API Reference (Auditor Endpoints)

|                         |                                                      |
|-------------------------|------------------------------------------------------|
| GET /auditor/           | Login page (redirects to case list if authenticated) |
| GET /auditor/cases      | Case list page (authenticated)                       |
| GET /auditor/cases/{id} | Case detail page — opens in new tab                  |
| POST /auditor/api/login | Authenticate   body: {username, password}            |
| GET /auditor/api/cases  | JSON list: all cases with summary fields             |

|                                                 |                                                           |
|-------------------------------------------------|-----------------------------------------------------------|
| <b>GET</b> /auditor/api/cases/{id}              | JSON full detail including session_data, photos, analyses |
| <b>POST</b><br>/auditor/api/cases/{id}/decision | Save decision   body: {decision, notes, auditor_name}     |

## 8. Case Folder Structure on Disk

All data is stored under the configured storage root (FI\_STORAGE\_ROOT). Each case folder is named {firstName}\_{uuid8}.

|                                 |                                                                                                                                                      |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>metadata.json</b>            | Submitted session metadata — basic info, Q&A,, photo list, documents                                                                                 |
| <b>session_data.json</b>        | Denormalised snapshot — all data in one JSON for auditor/reporting                                                                                   |
| <b>decision.json</b>            | Auditor decision: decision, notes, decided_by, decided_at                                                                                            |
| <b>selfie.jpg, hall.jpg ...</b> | Captured photos (JPEG)                                                                                                                               |
| <b>recording_*.webm</b>         | Full session video+audio recording (browser captureStream)                                                                                           |
| <b>statement.pdf</b>            | Applicant's bank statement                                                                                                                           |
| <b>responses/</b>               | Analysis outputs: geo_verification.json, pan_verification.json, nameplate_ocr.json, income_analysis.json, credit_analysis.json, photo_N_analysis.txt |
| <b>fi_report_*.pdf</b>          | Generated credit report (10-section PDF)                                                                                                             |
